ABSTRACT

A SYSTEM AND A METHOD FOR SELECTING IN A TERMINAL AN ARCHITECTURE DEDICATED TO A COMMUNICATIONS NETWORK

System for selecting an architecture (15, 16, 17) dedicated to a communications network (40, 41, 42, 50, 51, 52) in a terminal (10) including a user interface (11). According to the invention, the connection to the communications network (40, 41, 42, 50, 51, 52) being set up by means of a PDP context link via a mobile network, the system comprises selection means (18) adapted to control access to a dedicated architecture manager (19) integrated into the terminal (10) to manage an architecture (15, 16, 17) dedicated to a communications network (40, 41, 42, 50, 51, 52) and to process simultaneously the operation of the dedicated architectures (15, 16, 17) of the terminal (10) connected to a plurality of the communications networks (40, 41, 42, 50, 51, 52). Application to selecting access to a communications network (40, 41, 42, 50, 51, 52) of a set of communications networks each offering a set of services via a dedicated architecture (15, 16, 17) integrated into the terminal (10) which is connected to a public mobile network to which the user is a subscriber.
